Chapter 1

Introduction

Local contents

This report gives the result of running the computer algebra independent integration test.

The download section in the appendix contains links to download the problems in plain text format used for all CAS systems.

The number of integrals in this report is [227]. This is test number [142].

1.1 Listing of CAS systems tested

The following are the CAS systems tested:

1. Mathematica 13.1 (June 29, 2022) on windows 10.
2. Rubi 4.16.1 (Dec 19, 2018) on Mathematica 13.0.1 on windows 10.
3. Maple 2022.1 (June 1, 2022) on windows 10.
4. Maxima 5.46 (April 13, 2022) using Lisp SBCL 2.1.11.debian on Linux via sagemath 9.6.
5. Fricas 1.3.8 (June 21, 2022) based on sbcl 2.1.11.debian on Linux via sagemath 9.6.
6. Giac/Xcas 1.9.0-13 (July 3, 2022) on Linux via sagemath 9.6.
7. Sympy 1.10.1 (March 20, 2022) Using Python 3.10.4 on Linux.
8. Mupad using Matlab 2021a with Symbolic Math Toolbox Version 8.7 on windows 10.

Maxima and Fricas and Giac are called using Sagemath. This was done using Sagemath `integrate` command by changing the name of the algorithm to use the different CAS systems.

Sympy was called directly from Python.

1.2 Results

Important note: A number of problems in this test suite have no antiderivative in closed form. This means the antiderivative of these integrals can not be expressed in terms of elementary, special functions or `Hypergeometric2F1` functions. `RootSum` and `RootOf` are not allowed.

If a CAS returns the above integral unevaluated within the time limit, then the result is counted as passed and assigned an A grade.

However, if CAS times out, then it is assigned an F grade even if the integral is not integrable, as this implies CAS could not determine that the integral is not integrable in the time limit.

If a CAS returns an antiderivative to such an integral, it is assigned an A grade automatically and this special result is listed in the introduction section of each individual test report to make it easy to identify as this can be important result to investigate.

The results given in in the table below reflects the above.

System	% solved	% Failed
Rubi	100.00 (227)	0.00 (0)
Mathematica	99.56 (226)	0.44 (1)
Maple	95.59 (217)	4.41 (10)
Giac	71.81 (163)	28.19 (64)
Sympy	44.05 (100)	55.95 (127)
Fricas	37.44 (85)	62.56 (142)
Mupad	33.04 (75)	66.96 (152)
Maxima	33.04 (75)	66.96 (152)

Table 1.1: Percentage solved for each CAS

The table below gives additional break down of the grading of quality of the antiderivatives generated by each CAS. The grading is given using the letters A,B,C and F with A being the best quality. The grading is accomplished by comparing the antiderivative generated with the optimal antiderivatives included in the test suite. The following table describes the meaning of these grades.

grade	description
A	Integral was solved and antiderivative is optimal in quality and leaf size.
B	Integral was solved and antiderivative is optimal in quality but leaf size is larger than twice the optimal antiderivatives leaf size.
C	Integral was solved and antiderivative is non-optimal in quality. This can be due to one or more of the following reasons 1. antiderivative contains a hypergeometric function and the optimal antiderivative does not. 2. antiderivative contains a special function and the optimal antiderivative does not. 3. antiderivative contains the imaginary unit and the optimal antiderivative does not.
F	Integral was not solved. Either the integral was returned unevaluated within the time limit, or it timed out, or CAS hanged or crashed or an exception was raised.

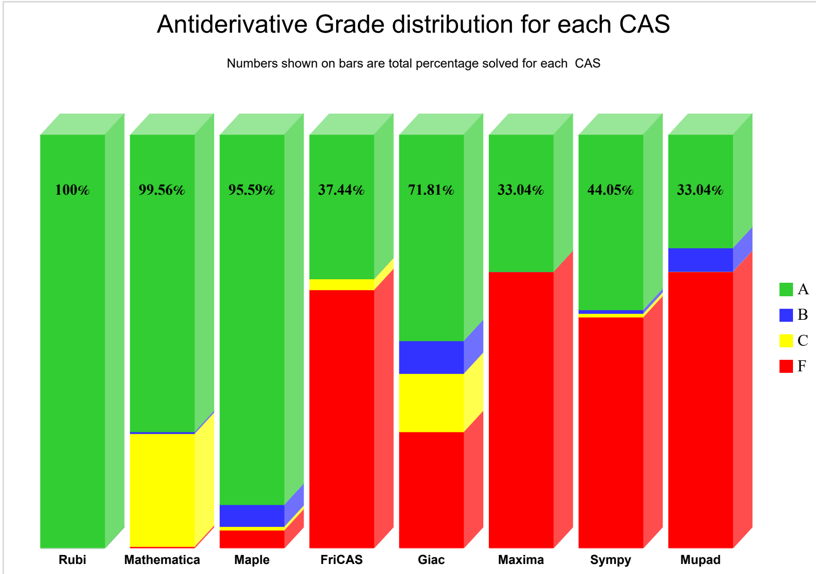
Table 1.2: Description of grading applied to integration result

Grading is implemented for all CAS systems. Based on the above, the following table summarizes the grading for this test suite.

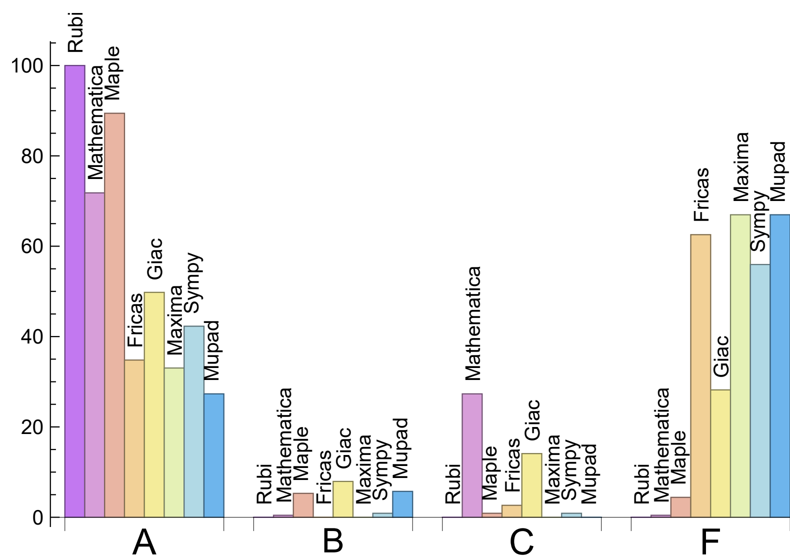
System	% A grade	% B grade	% C grade	% F grade
Rubi	100.00	0.00	0.00	0.00
Maple	89.43	5.29	0.88	4.41
Mathematica	71.81	0.44	27.31	0.44
Giac	49.78	7.93	14.10	28.19
Sympy	42.29	0.88	0.88	55.95
Fricas	34.80	0.00	2.64	62.56
Maxima	33.04	0.00	0.00	66.96
Mupad	N/A	5.73	0.00	66.96

Table 1.3: Antiderivative Grade distribution of each CAS

The following is a Bar chart illustration of the data in the above table.



The figure below compares the CAS systems for each grade level.



The following table shows the distribution of the different types of failure for each CAS. There are 3 types of reasons why it can fail. The first is when CAS returns back the input within the time limit, which means it could not solve it. This the typical normal failure **F** .

The second is due to time out. CAS could not solve the integral within the 3 minutes time limit which is assigned **F(-1)**.

The third is due to an exception generated. Assigned **F(-2)**. This most likely indicates an interface problem between sagemath and the CAS (applicable only to FriCAS, Maxima and

Giac) or it could be an indication of an internal error in CAS. This type of error requires more investigations to determine the cause.

System	Number failed	Percentage normal failure	Percentage timeout failure	Percentage exception failure
Rubi	0	0.00 %	0.00 %	0.00 %
Mathematica	1	0.00 %	100.00 %	0.00 %
Maple	10	100.00 %	0.00 %	0.00 %
Fricas	142	44.37 %	0.00 %	55.63 %
Giac	64	79.69 %	0.00 %	20.31 %
Maxima	152	60.53 %	0.00 %	39.47 %
Sympy	127	90.55 %	1.57 %	7.87 %
Mupad	152	100.00 %	0.00 %	0.00 %

Table 1.4: Failure statistics for each CAS

1.3 Time and leaf size Performance

The table below summarizes the performance of each CAS system in terms of time used and leaf size of results.

Mean size is the average leaf size produced by the CAS (before any normalization). The Normalized mean is relative to the mean size of the optimal anti-derivative given in the input files.

For example, if CAS has **Normalized mean** of 3, then the mean size of its leaf size is 3 times as large as the mean size of the optimal leaf size.

Median size is value of leaf size where half the values are larger than this and half are smaller (before any normalization). i.e. The Middle value.

Similarly the **Normalized median** is relative to the median leaf size of the optimal.

For example, if a CAS has Normalized median of 1.2, then its median is 1.2 as large as the median leaf size of the optimal.

System	Mean time (sec)	Mean size	Normalized mean	Median size	Normalized median
Rubi	0.10	81.65	0.73	75.00	1.00
Mathematica	2.66	86.96	0.78	69.50	0.83
Maple	0.90	99.46	0.86	67.00	0.91
Maxima	0.21	34.53	0.44	0.00	0.00
Fricas	1.42	40.40	0.49	36.00	0.57
Sympy	1.21	45.40	0.50	0.00	0.00
Giac	0.32	166.28	1.33	68.00	1.11
Mupad	0.03	9.67	0.16	-1.00	-0.05

1.6 list of integrals solved by CAS but failed verification

The following are integrals solved by CAS but the verification phase failed to verify the anti-derivative produced is correct. This does not mean necessarily that the anti-derivative is wrong, as additional methods of verification might be needed, or more time is needed (3 minutes time limit was used). These integrals are listed here to make it easier to do further investigation to determine why it was not possible to verify the result produced.

Rubi {}

Mathematica {}

Maple Verification phase not implemented yet.

Maxima Verification phase not implemented yet.

Fricas Verification phase not implemented yet.

Sympy Verification phase not implemented yet.

Giac Verification phase not implemented yet.

Mupad Verification phase not implemented yet.

1.7 Timing

The command `AbsoluteTiming[]` was used in Mathematica to obtain the elapsed time for each integrate call. In Maple, the command `Usage` was used as in the following example

```
cpu_time := Usage(assign ('result_of_int',int(expr,x)),output='realtime'
```

For all other CAS systems, the elapsed time to complete each integral was found by taking the difference between the time after the call completed from the time before the call was made. This was done using Python's `time.time()` call.

All elapsed times shown are in seconds. A time limit of 3 CPU minutes was used for each integral. If the integrate command did not complete within this time limit, the integral was aborted and considered to have failed and assigned an F grade. The time used by failed integrals due to time out was not counted in the final statistics.

1.8 Verification

A verification phase was applied on the result of integration for `Rubi` and `Mathematica`.

Future version of this report will implement verification for the other CAS systems. For the integrals whose result was not run through a verification phase, it is assumed that the antiderivative was correct.

Verification phase also had 3 minutes time out. An integral whose result was not verified could still be correct, but further investigation is needed on those integrals. These integrals were marked in the summary table below and also in each integral separate section so they are easy to identify and locate.

1.9 Important notes about some of the results

1.9.1 Important note about Maxima results

Since tests were run in a batch mode, and using an automated script, then any integral where Maxima needed an interactive response from the user to answer a question during the evaluation of the integral will fail.

The exception raised is `ValueError`. Therefore Maxima results is lower than what would result if Maxima was run directly and each question was answered correctly.

The percentage of such failures were not counted for each test file, but for an example, for the `Timofeev` test file, there were about 14 such integrals out of total 705, or about 2 percent. This percentage can be higher or lower depending on the specific input test file.

Such integrals can be identified by looking at the output of the integration in each section for Maxima. The exception message will indicate the cause of error.

Maxima integrate was run using SageMath with the following settings set by default

```
'besselexpand : true'
'display2d : false'
'domain : complex'
'keepfloat : true'
'load(to_poly_solve)'
'load(simplify_sum)'
'load(abs_integrate)' 'load(diag)'
```

SageMath automatic loading of Maxima `abs_integrate` was found to cause some problems. So the following code was added to disable this effect.

```
from sage.interfaces.maxima_lib import maxima_lib
maxima_lib.set('extra_definite_integration_methods', '[]')
```

```
maxima_lib.set('extra_integration_methods', '[]')
```

See `https://ask.sagemath.org/question/43088/integrate-results-that-are-different-from-using-maxima/` for reference.

1.9.2 Important note about FriCAS result

There were few integrals which failed due to SageMath interface and not because FriCAS system could not do the integration.

These will fail With error `Exception raised: NotImplementedError`.

The number of such cases seems to be very small. About 1 or 2 percent of all integrals. These can be identified by looking at the exception message given in the result.

1.9.3 Important note about finding leaf size of antiderivative

For Mathematica, Rubi, and Maple, the builtin system function `LeafSize` was used to find the leaf size of each antiderivative.

The other CAS systems (SageMath and Sympy) do not have special builtin function for this purpose at this time. Therefore the leaf size for Fricas and Sympy antiderivative was determined using the following function, thanks to user `slelievre` at `https://ask.sagemath.org/question/57123/could-we-have-a-leaf_count-function-in-base-sagemath/`

```
def tree_size(expr):
    r"""
    Return the tree size of this expression.
    """
    if expr not in SR:
        # deal with lists, tuples, vectors
        return 1 + sum(tree_size(a) for a in expr)
    expr = SR(expr)
    x, aa = expr.operator(), expr.operands()
    if x is None:
        return 1
    else:
        return 1 + sum(tree_size(a) for a in aa)
```

For Sympy, which was called directly from Python, the following code was used to obtain the leafsize of its result

```
try:
  # 1.7 is a fudge factor since it is low side from actual leaf count
  leafCount = round(1.7*count_ops(anti))

  except Exception as ee:
       leafCount =1
```

1.9.4 Important note about Mupad results

Matlab's symbolic toolbox does not have a leaf count function to measure the size of the antiderivative. Maple was used to determine the leaf size of Mupad output by post processing Mupad result.

Currently no grading of the antiderivative for Mupad is implemented. If it can integrate the problem, it was assigned a B grade automatically as a placeholder. In the future, when grading function is implemented for Mupad, the tests will be rerun again.

The following is an example of using Matlab's symbolic toolbox (Mupad) to solve an integral

```
integrand = evalin(symengine,'cos(x)*sin(x)')
the_variable = evalin(symengine,'x')
anti = int(integrand,the_variable)
```

Which gives `sin(x)^2/2`

1.10 Design of the test system

The following diagram gives a high level view of the current test build system.

2.2 Detailed conclusion table per each integral for all CAS systems

Detailed conclusion table per each integral is given by table below. The elapsed time is in seconds. For failed result it is given as F(-1) if the failure was due to timeout. It is given as F(-2) if the failure was due to an exception being raised, which could indicate a bug in the system. If the failure was due to integral not being evaluated within the time limit, then it is given just an F.

In this table,the column **N.S.** in the table below, which stands for **normalized size** is defined as $\frac{\text{antiderivative leaf size}}{\text{optimal antiderivative leaf size}}$. To help make the table fit, **Mathematica** was abbreviated to **MMA**.

2.3 Detailed conclusion table specific for Rubi results

The following table is specific to Rubi. It gives additional statistics for each integral. the column **steps** is the number of steps used by Rubi to obtain the antiderivative. The **rules** column is the number of unique rules used. The **integrand size** column is the leaf size of the integrand. Finally the ratio $\frac{\text{number of rules}}{\text{integrand size}}$ is given. The larger this ratio is, the harder the integral was to solve. In this test, problem number [209] had the largest ratio of [18]

Table 2.1: Rubi specific breakdown of results for each integral

#	grade	number of steps used	number of unique rules	normalized antiderivative leaf size	integrand leaf size	$\frac{\text{number of rules}}{\text{integrand leaf size}}$

x^2]), x], x] /; FreeQ[{a, b, c, d, m}, x] && IGtQ[n, 0] && NeQ[m, -1]
```

Rubi steps

$$\begin{aligned}\int x^4\sin^{-1}(ax)\,dx &= \frac{1}{5}x^5\sin^{-1}(ax)-\frac{1}{5}a\int\frac{x^5}{\sqrt{1-a^2x^2}}\,dx\\ &= \frac{1}{5}x^5\sin^{-1}(ax)-\frac{1}{10}a\text{Subst}\left(\int\frac{x^2}{\sqrt{1-a^2x}}\,dx,x,x^2\right)\\ &= \frac{1}{5}x^5\sin^{-1}(ax)-\frac{1}{10}a\text{Subst}\left(\int\left(\frac{1}{a^4\sqrt{1-a^2x}}-\frac{2\sqrt{1-a^2x}}{a^4}+\frac{(1-a^2x)^{3/2}}{a^4}\right)dx,x,\right.\\ &= \frac{\sqrt{1-a^2x^2}}{5a^5}-\frac{2(1-a^2x^2)^{3/2}}{15a^5}+\frac{(1-a^2x^2)^{5/2}}{25a^5}+\frac{1}{5}x^5\sin^{-1}(ax)\end{aligned}$$

Mathematica [A]
time = 0.07, size = 51, normalized size = 0.68

$$\frac{\sqrt{1-a^2x^2}\,(8+4a^2x^2+3a^4x^4)}{75a^5}+\frac{1}{5}x^5\text{ArcSin}(ax)$$

Antiderivative was successfully verified.

```
[In] Integrate[x^4*ArcSin[a*x],x]
[Out] (Sqrt[1 - a^2*x^2]*(8 + 4*a^2*x^2 + 3*a^4*x^4))/(75*a^5) + (x^5*ArcSin[a*x]
)/5
```

Maple [A]
time = 0.10, size = 72, normalized size = 0.96

method	result	size
derivativedivides	$\frac{\frac{a^5x^5\arcsin(ax)}{5}+\frac{a^4x^4\sqrt{-a^2x^2+1}}{25}+\frac{4a^2x^2\sqrt{-a^2x^2+1}}{75}+\frac{8\sqrt{-a^2x^2+1}}{75}}{a^5}$	72
default	$\frac{\frac{a^5x^5\arcsin(ax)}{5}+\frac{a^4x^4\sqrt{-a^2x^2+1}}{25}+\frac{4a^2x^2\sqrt{-a^2x^2+1}}{75}+\frac{8\sqrt{-a^2x^2+1}}{75}}{a^5}$	72

Verification of antiderivative is not currently implemented for this CAS.

```
[In] int(x^4*arcsin(a*x),x,method=_RETURNVERBOSE)
[Out] 1/a^5*(1/5*a^5*x^5*arcsin(a*x)+1/25*a^4*x^4*(-a^2*x^2+1)^(1/2)+4/75*a^2*x^2
*(-a^2*x^2+1)^(1/2)+8/75*(-a^2*x^2+1)^(1/2))
```

Maxima [A]
time = 0.52, size = 71, normalized size = 0.95

$$\frac{1}{5}x^5\arcsin(ax)+\frac{1}{75}\left(\frac{3\sqrt{-a^2x^2+1}\,x^4}{a^2}+\frac{4\sqrt{-a^2x^2+1}\,x^2}{a^4}+\frac{8\sqrt{-a^2x^2+1}}{a^6}\right)a$$

Verification of antiderivative is not currently implemented for this CAS.

```
[In] integrate(x^4*arcsin(a*x),x, algorithm="maxima")
```

```
[Out] 1/5*x^5*arcsin(a*x) + 1/75*(3*sqrt(-a^2*x^2 + 1)*x^4/a^2 + 4*sqrt(-a^2*x^2
+ 1)*x^2/a^4 + 8*sqrt(-a^2*x^2 + 1)/a^6)*a
```

Fricas [A]
time = 3.02, size = 49, normalized size = 0.65

$$\frac{15\,a^5x^5\arcsin\left(ax\right)+\left(3\,a^4x^4+4\,a^2x^2+8\right)\sqrt{-a^2x^2+1}}{75\,a^5}$$

Verification of antiderivative is not currently implemented for this CAS.

```
[In] integrate(x^4*arcsin(a*x),x, algorithm="fricas")
```

```
[Out] 1/75*(15*a^5*x^5*arcsin(a*x) + (3*a^4*x^4 + 4*a^2*x^2 + 8)*sqrt(-a^2*x^2 +
1))/a^5
```

Sympy [A]
time = 0.30, size = 70, normalized size = 0.93

$$\begin{cases} \frac{x^5\operatorname{asin}\left(ax\right)}{5}+\frac{x^4\sqrt{-a^2x^2+1}}{25a}+\frac{4x^2\sqrt{-a^2x^2+1}}{75a^3}+\frac{8\sqrt{-a^2x^2+1}}{75a^5} & \text{for}\ a\neq 0\\ 0 & \text{otherwise}\end{cases}$$

Verification of antiderivative is not currently implemented for this CAS.

```
[In] integrate(x**4*asin(a*x),x)
```

```
[Out] Piecewise((x**5*asin(a*x)/5 + x**4*sqrt(-a**2*x**2 + 1)/(25*a) + 4*x**2*sqr
t(-a**2*x**2 + 1)/(75*a**3) + 8*sqrt(-a**2*x**2 + 1)/(75*a**5), Ne(a, 0)),
(0, True))
```

Giac [A]
time = 0.41, size = 113, normalized size = 1.51

$$\frac{\left(a^2x^2-1\right)^2x\arcsin\left(ax\right)}{5\,a^4}+\frac{2\left(a^2x^2-1\right)x\arcsin\left(ax\right)}{5\,a^4}+\frac{x\arcsin\left(ax\right)}{5\,a^4}+\frac{\left(a^2x^2-1\right)^2\sqrt{-a^2x^2+1}}{25\,a^5}-\frac{2\left(-a^2x^2+1\right)^{\frac{3}{2}}}{15\,a^5}+\frac{\sqrt{-a^2x^2+1}}{5\,a^5}$$

Verification of antiderivative is not currently implemented for this CAS.

```
[In] integrate(x^4*arcsin(a*x),x, algorithm="giac")
```

```
[Out] 1/5*(a^2*x^2 - 1)^2*x*arcsin(a*x)/a^4 + 2/5*(a^2*x^2 - 1)*x*arcsin(a*x)/a^4
 + 1/5*x*arcsin(a*x)/a^4 + 1/25*(a^2*x^2 - 1)^2*sqrt(-a^2*x^2 + 1)/a^5 - 2/
15*(-a^2*x^2 + 1)^(3/2)/a^5 + 1/5*sqrt(-a^2*x^2 + 1)/a^5
```

Mupad [F]
time = 0.00, size = -1, normalized size = -0.01

$$\int x^4\,\mathrm{asin}(a\,x)\;dx$$

Verification of antiderivative is not currently implemented for this CAS.

```
[In] int(x^4*asin(a*x),x)
```

```
[Out] int(x^4*asin(a*x), x)
```

3.2 $\int x^3 \mathbf{ArcSin}(ax)\,dx$

Optimal. Leaf size=69

$$\frac{3x\sqrt{1-a^2x^2}}{32a^3}+\frac{x^3\sqrt{1-a^2x^2}}{16a}-\frac{3\text{ArcSin}(ax)}{32a^4}+\frac{1}{4}x^4\text{ArcSin}(ax)$$

```
[Out] -3/32*arcsin(a*x)/a^4+1/4*x^4*arcsin(a*x)+3/32*x*(-a^2*x^2+1)^(1/2)/a^3+1/1
6*x^3*(-a^2*x^2+1)^(1/2)/a
```

4.2 Listing of Grading functions

The following are the current version of the grading functions used for grading the quality of the antiderivative with reference to the optimal antiderivative included in the test suite.

There is a version for Maple and for Mathematica/Rubi. There is a version for grading Sympy and version for use with Sagemath.

The following are links to the current source code.

The following are the listings of source code of the grading functions.

4.2.1 Mathematica and Rubi grading function

```
(* Original version thanks to Albert Rich emailed on 03/21/2017 *)
(* ::Package:: *)

(* Nasser: April 7,2022. add second output which gives reason for the grade *)
(*                        Small rewrite of logic in main function to make it*)
(*                        match Maple's logic. No change in functionality otherwise*)

(* ::Subsection:: *)
(*GradeAntiderivative[result,optimal]*)

(* ::Text:: *)
(*If result and optimal are mathematical expressions, *)
(*         GradeAntiderivative[result,optimal] returns*)
(*  "F" if the result fails to integrate an expression that*)
(*      is integrable*)
(*  "C" if result involves higher level functions than necessary*)
(*  "B" if result is more than twice the size of the optimal*)
(*      antiderivative*)
(*  "A" if result can be considered optimal*)
```

4.2.2 Maple grading function

```
# File: GradeAntiderivative.mpl
# Original version thanks to Albert Rich emailed on 03/21/2017

#Nasser 03/22/2017  Use Maple leaf count instead since buildin
#Nasser 03/23/2017  missing 'ln' for ElementaryFunctionQ added
#Nasser 03/24/2017  corrected the check for complex result
#Nasser 10/27/2017  check for leafsize and do not call ExpnType()
#                   if leaf size is "too large". Set at 500,000
#Nasser 12/22/2019  Added debug flag, added 'dilog' to special functions
#                   see problem 156, file Apostol_Problems
#Nasser 4/07/2022   add second output which gives reason for the grade
